FIND WITH MATT 2023

Jenny was so excited! Spring Break was here, and it was time for their family road trip to California. They had been looking forward to this adventure for a long time!

They packed their car with bags, cameras, and snacks. The whole family was ready to visit amazing places and make special memories.

Today, they were driving to their first stop: Redwood State Park! "Wow, these trees are so tall!" said Jenny. "These Redwoods are more than 200 feet tall," said Dad, "The average age of the trees in Redwood State Park is 500 years old!"

Redwood bark is fire-resistant. This helps protect the trees from forest fires, allowing them to live for a very long time.

They drove further and arrived in San Francisco. They visited the Golden Gate Bridge.

Jenny said, "It's really big! I wonder how long it took to build the bridge." Dad replied, "It took about four years to build, and thousands of workers helped. It was the first suspension bridge in the world at that time. There was even a net under the bridge to save workers in case they fell while building it."

Did you know that the Golden Gate Bridge was painted a special color called international orange? The color makes the bridge stand out and easy to see even when the weather is foggy.

The next day, they went to Alcatraz Island. They listened to the audio guide: "This place used to be a prison. This prison was for people who did very bad things and needed to be kept away from everyone else. Because this island is surrounded by cold water and strong currents, it was really hard for anyone to escape."

Jenny said, "I'm glad it's not a prison anymore. This is a beautiful island! "

While in San Francisco, they also went to Fisherman's Wharf. Jenny watched sea lions lying in the sun. "Look at those funny sea lions!" said Jenny. "Why do sea lions like to sunbathe?" Mom responded, "I think they do it to stay warm and relax. Plus, it's fun to watch them play together!"

A

They continued further to Santa Cruz. There was a place called the Mystery Spot, where they could lean like Michael Jackson! Jenny screamed when she did it.

In the tilted house, they saw a ball roll uphill. Jenny wondered, "How does this place work? It's so strange!" Mom laughed, "I don't know, but it's so much fun trying to figure it out!"

The Mystery Spot is known for its strange gravitational effects, which make people feel like they are standing at odd angles.

On their way back to Seattle, they stopped at Wildlife Safari in Winston, Oregon. The animals didn't need to be in cages. Jenny said, "I wish I could touch them."

As they explored the Wildlife Safari, Jenny noticed something unusual - a cheetah with a dog!

Sometimes, dogs are paired with cheetahs to help them feel more comfortable and relaxed. The dogs are like companions for the cheetahs, and they learn to trust each other.

As the family drove back to Seattle, Jenny, Mom, and Dad agreed that their California adventure was an unforgettable experience filled with fun facts, beautiful sights, exciting adventures, and full of amazing moments. They were so happy and couldn't wait for their next family adventure!

Dear readers,

I hope you enjoyed this book. Guess what? This could potentially be the first book you have read that was created with the assistance of Artificial Intelligence (AI)!

The author J. Chen taught me how to craft entertaining stories and engaging characters. This book demonstrates the incredible collaboration between humans and Al to produce amazing creations.

As you delve deeper into the world of Al, remember to always be curious, ask questions, and explore new ideas. Most importantly, it's crucial to utilize Al in a manner that benefits everyone.

Thank you for reading this book, and enjoy uncovering more about Al!
